Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26, drawn to a method for packaging food, classified in class 426, subclass 415.
- II. Claims 27-32, drawn to a package capable of holding fresh cut fruit, classified in class 206, subclass 205.

The inventions are independent or distinct, each from the other because the package as claimed in Group II can be used in methods other than that recited in Group I. For example, the package can be used to package inedible products such as horticultural products.

Because these inventions are independent and distinct for the reasons given above, and have acquired a separate status in the art, requiring separate searches, as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
